**The Descent of Man, and Selection in Relation to Sex** Charles Darwin, 2008-09-02 In the current resurgence of interest in the biological basis of animal behavior and social organization the ideas and questions pursued by Charles Darwin remain fresh and insightful This is especially true of *The Descent of Man and Selection in Relation to Sex* Darwin's second most important work This edition is a facsimile reprint of the first printing of the first edition 1871 not previously available in paperback The work is divided into two parts Part One marshals behavioral and morphological evidence to argue that humans evolved from other animals Darwin shows that human mental and emotional capacities far from making human beings unique are evidence of an animal origin and evolutionary development Part Two is an extended discussion of the differences between the sexes of many species and how they arose as a result of selection Here Darwin lays the foundation for much contemporary research by arguing that many characteristics of animals have evolved not in response to the selective pressures exerted by their physical and biological environment but rather to confer an advantage in sexual competition These two themes are drawn together in two final chapters on the role of sexual selection in humans In their Introduction Professors Bonner and May discuss the place of *The Descent* in its own time and relation to current work in biology and other disciplines

**The Descent of Man and Selection in Relation to Sex** Charles Darwin, 1871-02-24 The nature of the following work will be best understood by a brief account of how it came to be written During many years I collected notes on the origin or descent of man without any intention of publishing on the subject but rather with the determination not to publish as I thought that I should thus only add to the prejudices against my views It seemed to me sufficient to indicate in the first edition of my *Origin of Species* that by this work light would be thrown on the origin of man and his history and this implies that man must be included with other organic beings in any general conclusion respecting his manner of appearance on this earth Now the case wears a wholly different aspect When a naturalist like Carl Vogt ventures to say in his address as President of the National Institution of Geneva 1869 *personne en Europe au moins n'ose plus soutenir la création indépendante de toutes les espèces* it is manifest that at least a large number of naturalists must admit that species are the modified descendants of other species and this especially holds good with the younger and rising naturalists

*The Descent of Man* Charles Darwin,Dragan Nikolic,2014-11-16 Darwin wrote of the fiery ordeal through which this book has passed He had avoided the logical outcome of the general theory of evolution bringing man into the scheme for twelve years and in fact it had by that time been so much accepted that the clamor of the opposition was not strident He had also been preceded in 1863 by Huxley s *Man s place in nature* In this book word evolution occurs for the first time in any of Darwin s works The last chapter is about sexual selection in relation to man and it ends with the famous peroration about man s lowly origin the wording of which differs slightly in the first edition from that which is usually quoted In a letter dated March 28 1871 Emma Darwin Vol II pp 202 203 Darwin mentions the help that his daughter Henrietta Emma had given him in reading the manuscript and correcting the style and calls her my very dear coadjutor and fellow labourer
